Custom incentives

Energy efficiency measures (EEMs) not listed in the incentive tables may be eligible for a custom energy efficiency incentive. Pacific Power will complete an analysis of the EEM cost and electric energy savings and determine whether to offer a custom energy efficiency incentive and the energy efficiency incentive amount. The custom energy efficiency incentive is Pacific Power's estimate of annual electric savings multiplied by \$0.10/kWh and subject to the incentive caps described below. Electric savings resulting from lighting interaction with mechanical equipment is not eligible for a custom energy efficiency incentive.

Energy efficiency incentive caps

Measures listed in incentives tables	Percent of energy efficiency project cost cap	1 year simple payback cap for energy efficiency projects
Lighting – Retrofit	70%	Yes
Lighting – New Construction/ Major Renovation	None	No
Motors	None	No
HVAC	None	No
Building envelope	None	No
Food service	None	No
Appliances	None	No
Irrigation (see note)	None	No
Dairy/farm equipment	None	No
Compressed air	None	No
Other energy efficiency measures (see note)	None	No
Measures not listed in incentives tables		
Lighting – New Construction/Major Renovation measures receiving a custom incentive	None	No
Other measures receiving a custom incentive	70%	Yes

Notes for energy efficiency caps table:

1. The 1 year simple payback cap means energy efficiency incentives will not be available to reduce the simple payback of an energy efficiency project below one year. If required, individual EEM energy efficiency incentives will be adjusted downward pro-rata so the energy efficiency project has a simple payback after incentives of one year or more.
2. EEM costs are subject to Pacific Power review and approval and Pacific Power may require additional documentation from the customer or owner.
3. Two irrigation energy efficiency measures have a measure cost cap. See the irrigation equipment incentive table for details.
4. The network personal computer power management software measure has a measure cost cap. See the office incentive table for details.

Additional notes about custom incentives

The baseline wattage for all retrofit linear fluorescent lighting EEMs is the lesser of

- a) wattage of existing equipment, or
- b) wattage of deemed baseline ballast and lamp combination listed in the lighting wattage table available on the Washington energy efficiency program section of the Pacific Power website.

Pacific Power may adjust the baseline electric energy consumption and costs to reflect any of the following: energy codes, standard practice, changes in capacity, changes in production or facility use and equipment at the end of its useful life. Such adjustments may be made for lighting energy efficiency measures installed in new construction projects where energy code does not apply.

All EEM costs are subject to Pacific Power review and approval prior to offering an energy efficiency incentive agreement. All final EEM costs are subject to Pacific Power review and approval prior to paying an energy efficiency incentive per the terms of the energy efficiency incentive agreement or approved application. Pacific Power review and approval of EEM costs may require additional documentation from the customer or owner.
