

HOW DOES BLUE SKY WORK?

1 As a Pacific Power customer who wants to support renewable energy, you enroll in Blue Sky and pay a little extra on your bill each month.

BLUESKY
RENEWABLE ENERGY

2 Pacific Power buys Renewable Energy Certificates (RECs¹) from renewable energy facilities on your behalf.

3 Renewable energy facilities in the western U.S. generate electricity and issue RECs that represent the environmental benefits of 1 megawatt-hour of renewable energy.

HOW IS MY MONEY HELPING?

RENEWABLE ENERGY

Pacific Power will purchase RECs on your behalf from newly developed facilities in your region, which in turn boost the local economy and build a market for renewable energy.

COMMUNITY BENEFITS

Depending on the option you choose, you can also support additional benefits like the construction of new community-based renewable energy projects in your state or the funding of native fish habitat restoration projects.²

¹Each REC is unique and cannot be resold.

²The Habitat option is available to Oregon customers only.
